Our role is to facilitate inclusive dialogue required to build shared understanding and innovative, research-based solutions and develop robust advocacy tools, including enabling frameworks at policy level; and build capacity for implementation.

**OUR PROJECTS**

As part of our Strategic Plan 2019 - 2030, *The One Pasifika Programme*, lays out the organisation’s plan for bringing about the transformative changes needed to achieve Green/Blue Economic models that will generate new jobs and skills, promote clean technologies, reduce environmental risks and poverty in member countries.

We aim to achieve this through our programmatic objectives, which are organised under the following clusters:

- **Cluster M** - Mainstreaming Green/Blue Economy
- **Cluster R** - Adaptive Solutions for Island Resilience
- **Cluster C** - Climate Action

All PIDF projects are aligned to our Cluster objectives.

**ISLAND RESILIENCE INITIATIVE**

The Island Resilience Initiative project is about building capacity for nationally-led public-private civic partnerships to drive implementation of the SDGs and other global agreements locally. It is a holistic, multidisciplinary and multi-sectoral approach to a broad spectrum of island challenges and opportunities, focused on a “precovery” mindset.
Island Resilience Definition & Framework

“Island resilience is the holistic, multidisciplinary and multi-sectoral approach to a broad spectrum of island challenges and opportunities, focused on a precovery mindset. Locally led, culturally appropriate and globally refined, systemic island resilience against shocks and stresses allows islands of all types better plan, respond, recover and flourish.”

Locally led, culturally appropriate and globally refined systemic island resilience against shocks and stresses allows islands of all types better plan, respond, recover and flourish. The Global Island Partnership (GLISPA), the Pacific Islands Development Forum (PIDF) and Precovery Lab conducted consultative meetings in three Pacific island countries in 2018 to establish the Island Resilience Initiative (IRI) in those three countries for the initial phase of the IRI. These were Palau, Marshall Islands and Fiji.

The consultations focused on solutions that build resilience and sustainability through local, national, regional and international partnerships. The Initiative will reinforce ambitious but also appropriate and “right-sized” projects and solutions on islands that can be scaled and financed globally with an initial focus on the six IRI pillars.
